

Google Chrome 105.0.5195.125

Full test: Acceptable
Compatibility: Medium
Found issues: 29

Mozilla Firefox 48.0.2

Full test: Acceptable
Compatibility: Low
Found issues: 17

Top severity issues

ID	Severity
QATC-677990	Critical
QATC-676571	Major
QATC-674660	Major
QATC-677165	Major
QATC-677856	Major
QATC-677077	Major

Testing environment

Operating system: Windows 10 (64-bit)
Browser: Google Chrome 105.0.5195.125
Mozilla Firefox 48.0.2

Recommendations

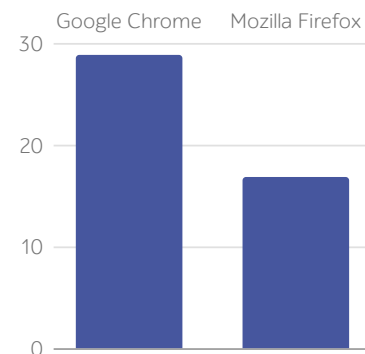

- Fix problems with the date of actions plans ([QATC-675822](#));
- The link should not be triggered outside of its scope ([QATC-675838](#));
- Fix the issue that the "Notifications" section should display incoming notifications ([QATC-675490](#));

Building Champions Client Portal

Product version: 1.0

The Building Champions Client Portal has been tested on two browsers. The main browser to use was Google Chrome. The overall quality of the application when running in this browser can be rated as Medium. GUI defects with Minor severity predominate. A small number of functional defects were found that have the severity of Major. The secondary browser for testing was Mozilla Firefox. Here, the quality of the application can be rated as Low. Functional defects predominate. One of them has severity Critical. Mozilla Firefox was not able to fully test the application, because the documents that were loaded into the system were not displayed.

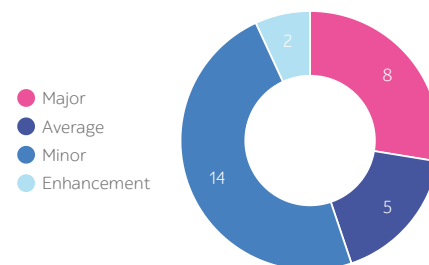

The total number of defects by browser

The chart presents the ratio of defects by browser. For Google Chrome 29 issues were found and for Mozilla Firefox 17 issues were found.

Detailed quality analysis for Google Chrome 105.0.5195.125

The total number of defects by severity

The greatest number of defects have severity Minor (48%). Severity Major have 28% defects. There are also defects with severity Average (17%) and Enhancement (7%).

The text is not aligned on the left side in the tab Dashboard ([QATC-674332](#)).

Additional information

Testing dates: 29.09.2022 - 07.10.2022
Time spent: 20 hours

Quality of separate modules

Module	Quality	Comments
--------	---------	----------

Modul: Dashboard

Notifications	• Medium	The quality of this module function is rated as low. The defect (QATC-674660 Manipulations made within one account are reflected by the same actions on other accounts available for testing) is functional and significantly affects the quality of the tested functionality. Negatively affects the customer's attitude to the product (service). In total, 1 functional (major) and 1 Graphical User Interface (minor) were found.
Upcoming Sessions	• Medium	The text of the quality report: The quality is average- schedules are available for viewing, but the format of dates and times do not correspond to the specification, as well as the operation of links is not correct.
Pending Action Plans	• Medium	On Google Chrome, most of the bugs are not related to the Pending Action Plans section. There is a bug related to dates (QATC-677308), but they are sorted correctly in the section. There is also a bug related to Pending Action Plans, but already in the Action Plans tab (QATC-677314). I am more concerned about GUI bugs, for example: incorrectly signed section name (QATC-677320), and links not displaying as they should (QATC-677323). Since the module itself suffers only from GUI bugs, I rate above medium. There is also a proposal to make the date not under the plan, but on the right, as in the specification (QATC-677312)
Recent Documents	• Medium	The Recent Documents section has not been fully tested. Documents are not uploaded to the database. A bug has been found, which is associated with the lack of a link to all documents (QATC-676571). This defect complicates the work of new users, but is not critical. Since there is a separate tab with all documents. The second bug is the GUI. The name of the section in the application does not match the name of the section in the specification (675830). It does not affect the operation of the application, but needs to be fixed.

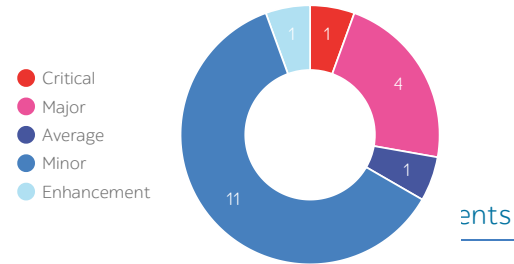

Modul: Action plans

Pending Action Plans	• Medium	The quality of this section is rated as average. 6 defects were found in the module "Pending Action Plans". There is no inlay when clicking on the action plan name: (QATC-675833). Also, action plans are shown in the wrong order by date: (QATC-675822)
Completed Action Plans	• Below Low	24 defects were opened in this module. The most significant defect here is application crash by sending more than 1,000 characters (QATC-100061). Also it's impossible to save user's comment (QATC-100042). Two defects are connected with GUI: (QATC-100253) and (QATC-100049). For more details about defects found in "Module 4" module follow the link.

Detailed quality analysis for Mozilla Firefox 48.0.2

The total number of defects by severity

The greatest number of defects have severity Minor (58%). One of the defects has severity Critical (6%). There are also defects with severity Average (6%), Enhancement (6%) and Major (24%).

Notifications	• Low	The quality of this module function is rated as low. the defect (QATC-677077) is functional and significantly affects the quality of the tested functionality. Critically negatively affects the customer's attitude to the product (service). In total, 1 functional defect (Major) was detected.
Upcoming Sessions	• Low	The text of the quality report: It is impossible to conduct further testing of my section due to blocking or lack of functionality.
Pending Action Plans	• Low	On Mozilla Firefox, out of 14 tests, only 4 were passed, because the system does not appear on version 48.0.2 . And yet, the link "See All Action Plans" (QATC-677324) does not work on this environment, this bug has a low severity, since there is a simple workaround. There is also a bug from Google Chrome (QATC-677320): incorrectly signed section name. Based on the fact that the data is simply not displayed on Mozilla Firefox 48.0.2, it is impossible to set higher than Low.
Recent Documents	• Medium	The Recent Documents section has not been fully tested. Documents are not uploaded to the database. A bug has been found, which is associated with the lack of a link to all documents (QATC-676571). This defect complicates the work of new users, but is not critical. Since there is a separate tab with all documents. The second bug is the GUI. The name of the section in the application does not match the name of the section in the specification (675830). It does not affect the operation of the application, but needs to be fixed.

Modul: Action plans

Pending Action Plans	• Low	Finding most of the possible defects is not available due to the lack of display of action plans: (QATC-676523). A button defect has also been identified: (QATC-676532). Common GUI defects as in the Chrome browser.
Completed Action Plans	• Low	It is also impossible to analyze possible bugs. There is a defect with the link: (QATC-675838)
